

What does a seed need to grow?

Today we set up a test to find out.

WARM-UP • 5 MINUTES

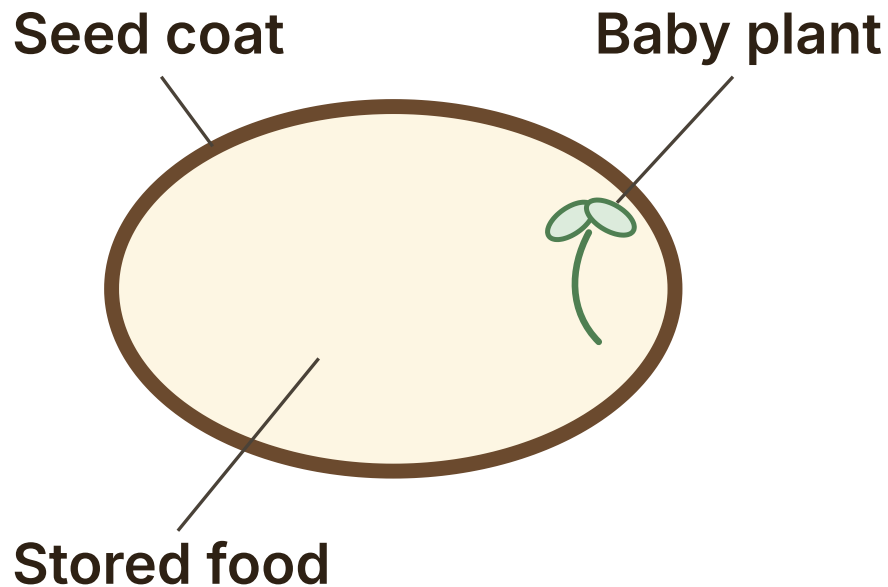

Why isn't it growing?

This bean has been in a jar in the kitchen for a whole year.

It has not grown one bit.

Turn and talk: What would this bean need to start growing?

Inside a seed

- A seed holds a baby plant and its food.
- When a seed gets what it needs, it starts to grow. We say it **germinates**.
- Our question: does it need water? Light? Soil?

Fair test: change one thing. Keep the rest the same.

The four-cup test

A

Wet towel

In the light

Normal cup

B

Wet towel

In the dark

Tests: light

C

Dry towel

In the light

Tests: water

D

Wet soil

In the light

Tests: soil

1. Label four clear cups A, B, C, and D.
2. Put 3 beans in each cup. Set up each cup like its card.
3. Predict: which cups will sprout?
4. Check every day. Draw what you see in your log.

Teacher tip: soak the beans overnight first. Most sprout in 3 to 5 days.

EXIT TICKET • 5 MINUTES

Make a prediction

Which cup do you think will **not** sprout? Why?

I think Cup ____ will not sprout
because _____.

We will check our cups in Lesson 4.
